Projects / Open-Source

Online tickeket booking system,ho *PHP*

A ticket booking system in PHP is a web-based application that allows users to reserve, book, or purchase tickets for various events, travel, movies, or other activities.

Hospital managment System *Java,MySQL*

The primary aim of a Hospital Management System is to streamline healthcare operations, improve patient care, and optimize resource utilization through digital solutions.

Key Objectives:

Efficient Patient Management: Manage patient registration, appointments, medical history, and billing in a centralized system.

Staff Coordination: Facilitate better communication and task allocation among doctors, nurses, and administrative staff.

Inventory Management: Track and maintain medical supplies, equipment, and pharmaceuticals efficiently.

Certifications

- Spring - Ecosystem and Core
- Cyber Security
